

GLOBE

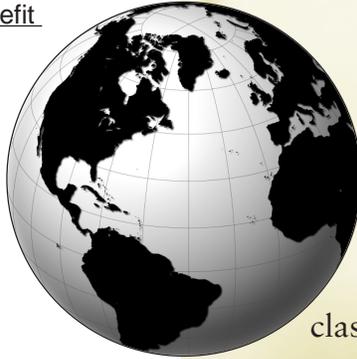

Global Learning and Observation to Benefit

the Environment (GLOBE) is an

international environmental science and

education program launched by

Vice President Al Gore on Earth Day, April 22, 1994.

In the last volume of the *Forum*, you read about one venue for connecting your classes to other classes with English speaking students via the Internet. The articles about NGS Kids Network introduced the program and described some of the activities that the students participate in during their lessons. In this issue we would like to share with you another option for connecting your class with other classes around the world via the Internet. It's called GLOBE. One of the similarities between the two programs that you will note is their applicability to content-based instruction. Both programs have a focus on science and environmental issues.
